

**Feasibility Project on Production of Clinical Nutrition Products and Their Basic Inputs Using Domestic Capacities
(TUBITAK AYDE Project No: 4189034)**

Kimera Life Sciences puts effort to produce specific nutrition products which are totally or partly imported using primarily domestic sources/capacities. In this frame, as Kimera Life Sciences, we have already developed an enteral nutrition base formula and has led to form a consortium to seek possibilities of commercialization of this formulation by bringing Panagro Agriculture, Livestock, Food Co. (TORKU), Konya Food and Agriculture University and Ankara University together. This consortium has started to analyze the feasibility of such attempt and financial support for this action has been obtained from TUBITAK AYDE Interface Support Program.
